

Formtek-Maine announces release of the Servomax III feed control system, available on the Cooper-Weymouth, Peterson and Rowe Machinery two-roll and four-roll feed systems. The Servomax III delivers enhanced features over the popular Servomax II, such as increased job memory to 999, increased torque output for heavier capacity or increased production rate requirements. The Servomax III Control provides accuracy to +/- .002" roll position, while absolute positioning feedback logic avoids accumulate error in continuous cycling, particular critical in close—tolerance, non-piloted blanking runs. Optional functions include pneumatic roll lift to 250 strokes per minute, servo-pneumatic roll lift to 400 strokes per minute, For more information, call 1-800-247-2645.
