

SERVOSENSOR OFFERS MAXIMUM VERSATILITY

Formtek-Maine announces release of the Servosensor feed control system, available on the Cooper-Weymouth, Peterson and Rowe Machinery two-roll and four-roll feed systems. The Servosensor feed control system allows accurate material positioning through precision feedback from an optical sensor. The Servosensor control allows the operator to program a given feed length as a basis for the move, whereby the feed moves the given distance and then commences to “look” for input from an optical sensor based on preprogrammed contrast. The Servosensor feed control is ideal for any application requiring precise accuracy of a pre-printed surface. For more information, call 1-800-247-2645. Visit www.cwpcoil.com www.runwithrowe.com.
